Vitrification in Assisted Reproduction

Second Edition

Edited by
Michael J. Tucker, PhD, FiBiol, HCLD(AAB)
Director of IVF and Embryology Laboratories
Shady Grove Fertility RSC
Rockville, Maryland, USA

Juergen Liebermann, PhD, HCLD(AAB)
Director of Embryology, Andrology & Endocrinology Laboratories
Fertility Centers of Illinois
Chicago, Illinois, USA
# Contents

Foreword ix  
Preface xi  
Acknowledgments xiii  
Contributors xv  

1 Overview of biological vitrification  
   Gregory M. Fahy  

2 Vitrification of oocytes and embryos: Finally a recognized technique, but still a source of concern and debate  
   Pierre Vanderzwalmen, Nicolas H. Zech, Fabien Ectors, Yannis Panagiotidis, Achillea Papatheodorou, Prapas Yannis, and Barbara Wirleitner  

3 Intracellular concentration of cryoprotectant during vitrification and slow-freezing cryopreservation procedures  
   Pierre Vanderzwalmen, Fabien Ectors, Barbara Wirleitner, Astrid Stecher, Deborah Desmet, Jacqueline Greindl, Amandine Helson, Sabine Vanderzwalmen, Mark G. Larman, Nicolas H. Zech, and Delphine Connan  

4 Importance of cooling versus warming rates in vitrification techniques  
   Shinsuke Seki  

5 The movement of water and cryoprotectants in mammalian oocytes and embryos: Membrane permeability and aquaporins  
   Keisuke Edashige and Magosaburo Kasai  

6 Open versus closed systems  
   Mark G. Larman and Pierre Vanderzwalmen  

7 Automatic vitrification: Development of the Gavi system  
   Tammy K. Roy, Susanna Brandi, Cara K. Bradley, and Tetja T. Peura  

8 Vitrification at minimum volume: From basic science to clinical application  
   Amir Arav  

9 Vitrification of oocytes: General considerations and the use of the Cryotec method  
   Masashige Kuwayama  

10 Safety of vitrification and cryostorage and optimization of cryopreservation protocols  
   Lodovico Parmegiani and Marco Filicori  

11 Physiological aspects of oocyte vitrification  
   Mark G. Larman and David K. Gardner
